

Mathematics in Key Stage 1

Glossary

Vocabulary	Image	Definition and example
Array		<p>A pictorial representation of a calculation, using rows of dots. It helps children to understand multiplication and times tables.</p>
Base 10		<p>Base-10 describes how much numerical value each digit has in a whole number. It is used to help pupils understand place value.</p> <p>E.g. 10 ones= 1 ten, 10 tens= 1 hundred etc.</p>
Capacity		<p>How much a container can hold. Capacity is measured using units such as litres, centiliters and millilitres etc.</p>
Flexible partitioning		<p>Explores how numbers are made up of smaller numbers.</p> <p>As they begin to add and subtract across the ten boundary, they can use this idea of flexible partitioning or regrouping to make a whole ten.</p>
Manipulatives		<p>An object that children or practitioners can interact with. Manipulatives support the teaching and learning of mathematics.</p>

<p>Mass</p>		<p>How much an object weighs. It is usually measured in grams and kilograms.</p>
<p>Number bonds</p>		<p>Pairs of numbers that add together to make a given number. For example, 2 + 8 and 4 + 6 are number bonds to 10.</p>
<p>Number sentence</p>		<p>A number sentence is how a calculation is written, using numbers and symbols. For example, $5 + 7 = 12$ is an addition number sentence</p>
<p>Numicon</p>		<p>The holes in the Numicon shapes represent the numbers 1 to 10. Numicon can be used to add by placing the number shapes together. Numicon can be used to find number bonds by placing smaller numbers on top of a bigger number.</p>
<p>Partition</p>		<p>To partition a number means to separate a number into separate parts (ones, tens, hundreds, thousands etc). Partitioning is a way of splitting numbers into smaller parts to make them easier to work with.</p>
<p>Part-whole model</p>		<p>Refers to how numbers can be split into parts; for example, ten can be split into three and two.</p>

<p>Ten/ Twenty frame</p>		<p>A ten frame is a rectangle, separated into two rows with 10 equal spaces. Children are taught to fill the frame with counters, going from left to right.</p> <p>Counters can be arranged in different ways to represent different numbers.</p>
<p>Vertex/ vertices</p>		<p>A vertex is formed where two sides meet. Vertices refers to more than one vertex. Children may already know these as being a corner or corners.</p>
